also in Ozman's code, there are a lot of files from [beinecke.library.yale.edu/modules](#). if you can get all of file from that directory, that'll be great.

"sites\beinecke.library.yale.edu\modules\date\date\_api\date.css": 1,

"sites\beinecke.library.yale.edu\modules\date\date\_popup\themes\datepicker.1.7.css": 1,

"modules\field\theme\field.css": 1,

"sites\beinecke.library.yale.edu\modules\flexslider\assets\css\flexslider\_img.css": 1,

"sites\beinecke.library.yale.edu\modules\logintoboggan\logintoboggan.css": 1,

"modules\node\node.css": 1,

"modules\search\search.css": 1,

"modules\user\user.css": 1,

"sites\beinecke.library.yale.edu\modules\views\css\views.css": 1,

"sites\beinecke.library.yale.edu\modules\colorbox\styles\default\colorbox\_style.css": 1,

"sites\beinecke.library.yale.edu\modules\ctools\css\ctools.css": 1,

"sites\beinecke.library.yale.edu\modules\ldap\ldap\_servers\ldap\_servers.admin.css"

as well as anything under [beinecke.library.yale.edu/sites/default/files/](#)

Since palmquist is the only app on that server, I will move this app to our web app server [libapp.library.yale.edu](#) to keep all web apps together, then eventually shutdown current palmquist server. [libapp-test.library.yale.edu](#) is the test server. I will talk you more about details. (edited)
